

SMARTSAVER

Maximum Performance, Minimum Space

Metal stamping in today's market requires maximum versatility. Press rooms also need to conserve floor space. For many applications, SmartSaver can save as much as 50% of the floor space required by a conventional feed line without making sacrifices in performance!

SmartSaver is designed to handle a wide variety of widths and thicknesses of materials. Lines can be designed to handle mild and high strength steel up to 72" wide and coil weights up to 60,000 lbs. The list of standard features is long yet can be customized to solve your unique challenges.

All of this for a price that is often less than a comparable conventional feed line. Why waste valuable floor space? SmartSaver – it truly is Maximum Performance and Minimum Space.

SMART. TOUGH. PROVEN.

Standard Equipment

- Widths from 12" to 72" (6" increments)
- Thickness up to .187" (.250" HD model)
- Coil weights ranging from 6,000 lbs. to 60,000 lbs.
- Lift assist "tongue" to simplify threading (systems w/o coil cars)
- Powered rollers on coil car for easy threading
- Pivoting rocker arm for hands-free threading
- Integrated debender included to induce a reverse-bend in thicker materials to ease threading
- Adjustable feed height cabinet (+/-4")
- Pilot release of feed and upper straightener rolls
- Powered feeder/straightener or servo feed with pull-thru straightener
- Powered reel
- Failsafe disc brake (10,000 lbs. capacity and higher)
- Three or four mandrel pad reel construction with inner and outer keeper arms
- Photo eye or laser loop control
- Slant top operator station with color touch screen
- Centralized controls for complete line (pendants included for feeder and reel/coil car)
- Heavy-duty "C" framed edge guides
- Full width feed rolls with matte finish
- High torque screw jacks used for upper straightener roll adjustment
- Hold down arm with powered wheel
- Powered, pull off roll for feeding heavier-gauge material into the slack loop (HD model only)

Optional Equipment

- Motorized coil keeper rolls
- Hydraulic reel travel for coil centering
- "SmartLoop" control to control feeder and payout drives for more precise loop control
- Powered and/or automated cabinet height, straightener roll and edge guide adjustment
- Ethernet connectivity for drive system
- Remote off-site support
