

High quality diamond compounds that deliver excellent and consistent results. Formulated for professional performance on hardened tool steels, carbide, aluminum, and other materials. All our formulations consist of high concentration, micronized manufactured diamonds.

To meet your requirements, there are 3 types of formulations available:

Oil Based—formulated for compatibility in applications where petroleum distillates are used. These slurries/suspensions offer higher surface finish.

Universal Base—formulated for compatibility with most petroleum distillates applications as well as water extender applications. They offer quick, easy cleanup without sacrificing surface finish.

Water Based—formulated for ease of use in lapping and polishing systems where fast removal rates with high surface finishes are required. They are water soluble, so no harsh chemicals are needed for clean up.

The PPT diamond compounds are color coded for quick identification

Final Finishing	Preparatory	Stock Removal
● 1/4 micron, Grey	● 6 micron, Orange	● 45 micron, Brown
● 1 micron, Cream	● 9 micron, Green	● 60 micron, Purple
● 3 micron, Yellow	● 15 micron, Blue	● 90 micron, Black
	● 30 micron, Red
